In transportation there are no trifles, especially in regard to the fastening of cargo. Professional MTR's teams employs who fix goods have all necessary licenses and certificates. **MTR is not afraid of non-standard and oversize cargo: if necessary the company will develop a scheme, drawings for stowing and fastening cargo on the rolling stock, and agree to the relevant authorities.**

- At the Baltic railways' stations of the Riga-Krasta branch of LDZ railway to carry out loading and unloading MTR employs its own team of certified slingers.
- Experienced loaders perform lifting work of any complexity. This type of work is done by the most experienced company personnel who have appropriate qualifications and experience.

- Special technological equipment available to the professionals of MTR allows rigging of equipment in a short time at a high professional level. In the arsenal of the company's specialists are available: slings, accommodations and points for attaching and lifting, fittings, wire rope and chain, turnbuckles trucks, cable clamps, hooks, blocks, etc. Cargo gears and handling devices. Mechanisms: tackle, manual, pneumatic, cable, vacuum lifts, hoists and lever assembly, jacks, hydraulic systems, movement of goods-lifts.
- Development of schemes of loading, stowing and fastening of cargo, preparation of the necessary supporting documentation for registration of special permits for the rail transport of oversized and heavy cargoes.
