

Transportation to CIS, Baltic, Western, Eastern and Central Europe, Asia and the U.S.

For international road transport are used tilt trucks and vehicles with cargo space from 82 to 120 cubic meters, equipped with ADR-sets for the transport of dangerous goods, also refrigerator, small capacity trucks and special trailers for oversize and heavy cargoes.

Today, every customer of MTR can use for road transport the following services:

- Individual development of route and selection of cargo type transportation.
- Collection of goods from shippers, storage and processing at the warehouse, delivery to the place of loading to the loading docks.
- Control of cargo movement and drawing up a list of necessary documents for its registration.
- Operations on the transportation of all types of cargo, ranging from bulky and finishing general goods (work is carried out by experienced logisticians who have been employed for at least 3 years).
- Providing complete information about the cargo on the whole route.
- Cargo insurance.
- Consultations on the organization and design of transport.
- When transporting oversized cargo MTR will develop a draft of fastening, to agree the route in the traffic police and, where necessary, ensure the proper convoy of the goods.

To implement truck transportation MTR uses attracted vehicles.
